

The NeuroImpulse Protocol

Spinal Basics

October 5-7 Taiwan 2012

The Ambassador Hotel - Taipei

63 Chung Shan North Road, Section 2, Taipei 104, Taiwan

Ph: 886-2-2551-1111

About the NeuroImpulse Protocol

The NIP technique came about during the 1990's. It is the brainchild of Dr Neil J Davies, the author of the popular text "Chiropractic Pediatrics A Clinical Handbook" published by Churchill Livingstone. During this time Dr Davies was striving to evolve a technique approach to be used with babies that was absolutely precise neurologically, but extremely gentle in its application.

Ultimate Precision

Along with its gentleness (you can tolerate the thrust on your eyeball!) the uniqueness of the NIP system lies in its ability to direct the chiropractor to exactly the right location to adjust. It does this by its highly sophisticated integration of very precise chiropractic assessment techniques and detailed neurological examination. The technique is so precise, the typical NIP practitioner needs only adjust one location per visit to achieve maximum, sustainable clinical outcomes. The assessment technique is so accurate it led one medical specialist who was spending some time watching one of the Kiro Kids chiropractors practice to remark that in all his training and specialist practice he had never seen such a sophisticated approach to the neurological examination or such rapid changes following treatment.

Predictable, reproducible clinical results for patients of all ages

As development progressed it soon became evident that the technique was just as applicable to the adult population and in fact was far superior in the clinical results it produced than the systems being used by Dr Davies at the time. Some 8 years of clinical research in the patient setting has led to the consolidation of an amazingly accurate, reproducible system of subluxation assessment that affords the chiropractor an opportunity to impact even the most difficult of cases.

Intelligent, neurological chiropractic at its brilliant best

The NIP technique is used exclusively throughout the Kiro Kids Family Chiropractic Clinics in Victoria Australia by all the chiropractors and the result has been nothing short of astonishing in terms of new patient numbers. Patients drive long distances to receive NIP technique because the results they are getting are quick and sustainable and they don't get hurt by hard manipulative style techniques.

The NeuroImpulse Protocol

Course Outline

At the conclusion of this course the participant is expected to be able to;

- Describe the neurological modelling of the NeuroImpulse Protocol in terms of fundamental neurophysiological mechanisms, sensory overload, dysafferentation and neural plasticity
- Perform a precise biomechanical assessment of the upper cervical complex in terms of the universal axes of rotation (X, Y & Z)
- Perform a precise biomechanical assessment of the lumbopelvic region in terms of the universal axes of rotation (X, Y & Z)
- Perform a precise biomechanical assessment of the lower cervical complex in terms of the universal axes of rotation (X, Y & Z)
- Perform a precise biomechanical assessment of the thoracic and lumbar spinal areas in terms of the universal axes of rotation (X, Y & Z)
- Perform a relevant postural examination
- Perform a neurological assessment to include reflexes, myotomes and sclerotomes
- Demonstrate the ability to synthesize and correlate the information gained from the examination protocols into a working diagnosis for chiropractic intervention
- Demonstrate the ability to skilfully apply adjustive impulse to the correct anatomical structure in the appropriate direction dictated by the correlated results of the physical examination

ENROL NOW! Limited spaces available early registration is recommended.
Course fees \$890 AUD Includes full colour manual, daily lunch and refreshments
